Nelly's face looks filled out

It's not just her hair that's changed — Nelly Furtado's entire face looks different! Chicago-based plastic surgeon Dr. Peter Geldner thinks cheek implants, fillers or a mid-face-lift may have given the 28-year-old singer her new apple-shaped cheeks, though her rep

denies any work. Dr. Richard Fleming, co-director of the Beverly Hills Institute of Aesthetic & Reconstructive Surgery, adds that Nelly could have plumped her cheeks and filled the hollows beneath her lower eyelids with a filler (possibly Juvéderm).

Madonna seems a bit lifted

These days Madonna's not just a pop icon — she's the poster child for defying time. The 49-year-old looks perfect, so she may have had a face-lift to raise her cheeks, eliminate the hollows under her eyes and tighten her jawline, says Dr. Peter Geldner. But Beverly Hills plastic surgeon

Dr. Renato Calabria notes that the lines that run from Madonna's nose to the outer corners of her mouth merely look less prominent, which could just be the result of a filler like Restylane or Juvéderm. Plus, Madge's consistently smooth forehead (now *and* then) may just be from Botox, Dr. Calabria adds.
